

Dear Ceph hiring team:

I'm Sol, a self-taught developer who loves open-source software.

I recently finished an internship and I'm now looking for interesting opportunities which lead me to your [Upstream Documenter opening](#).

The opportunity seems to be aligned with many of my skills and goals as:

- I know how to code in Python and Javascript.
- I worked on OpenStack Upstream during my internship adding support for shared file systems (Manila) to the OpenStack client.
- Used Git and Gerrit to get my work reviewed and published.
- Have also worked on improving existing and adding new documentation to Openstack and Muzima projects using Markdown and reStructuredText.
- I'm familiar with storage, and how REST APIs and JSON is used in large architectures.
- I love Linux and it's command-line.
- I'm looking forward to getting more involved with the Openstack community and learn more about the ecosystem. This position would let me do both as I'd have to communicate with developers and write good docs to help the users.
- In my path of self-learning, documentation helped me a lot to understand how things worked. Because of this, I realized documentation is key to extend and promote the usage and development of any tool, framework or language.

The nature of the job being remote and contract fits my needs well too, as I'm about to move abroad to Italy (Rome, to be more precise) next week. Working remotely is something I'm familiar with and consider it to be a positive side of the offer.

If you think I'd be a good fit or otherwise, let me know!

I'm always open to constructive feedback.

Regards,
Soledad Kuczala
